

CRM SYSTEM DOCUMENTATION

(CRM with AI Agent–Assisted Sales & Support)

1. Introduction

1.1 What is This CRM System?

This project is a **Customer Relationship Management (CRM) system** designed to manage:

- Sales leads
- Customer support queries
- Human agent workflows
with the **assistance of AI agents**, as shown in the system flowchart.

The CRM ensures that:

- All customer interactions are captured centrally
 - AI agents handle first-level interaction and filtering
 - Human agents focus on **high-value leads and complex issues**
-

1.2 Purpose of the CRM

The purpose of this CRM system is to:

- Improve lead handling efficiency
- Reduce unnecessary workload on sales and support teams
- Ensure faster response times

- Provide a structured, trackable customer journey
 - Increase sales conversion and customer satisfaction
-

2. Target Clients

This CRM is designed for organizations that manage **high volumes of customer interactions**.

2.1 Primary Target Clients

1. B2B & B2C Businesses

- Product-based companies
- Service providers

Need: Structured lead and customer tracking.

2. Sales-Oriented Organizations

- SaaS companies
- Real estate firms
- Financial service providers

Need: Lead qualification and deal closure tracking.

3. Customer Support–Heavy Organizations

- Enterprises with helpdesk operations
- Public service portals
- Utility service providers

Need: Efficient ticket handling and escalation.

4. Education & Training Platforms

- Coaching institutes
- Online education providers

Need: Inquiry management and enrollment follow-ups.

5. Government & Enterprise Systems

- Grievance systems
- Compliance portals

Need: Controlled, traceable request handling.

3. Reference Platform

This CRM takes **functional reference** from **LeadSquared**.

What is Taken as Reference

- Lead lifecycle stages
- Centralized lead management
- Sales pipeline concept
- Reporting structure

What is Custom in This CRM

- AI agent–assisted workflows

- Custom escalation logic
 - Domain-specific CRM flow
-

4. Key Uses of the CRM

4.1 Sales Management

- Lead capture from multiple sources
 - AI-based initial qualification
 - Human-led deal closure
 - Follow-up tracking
-

4.2 Customer Support Management

- Ticket creation and categorization
 - AI-based first-level resolution
 - Escalation to human agents
 - Resolution tracking
-

4.3 Management & Reporting

- Lead conversion analysis
- Agent performance tracking
- Ticket resolution metrics

5. System Architecture (High-Level)

Core Components

1. Customer Entry Layer

- Website forms
- Chat interface
- Advertisement landing pages

2. CRM Core System

- Lead database
- Ticket database
- Workflow engine

3. AI Agent Layer

- Lead Management AI Agent
- Customer Support AI Agent

4. Human Agent Layer

- Sales agents
- Support agents

5. Reporting & Analytics

- Dashboards
 - KPI reports
-

6. End-to-End Workflow (Flowchart Aligned)

7. Customer Entry Flow

Step 1: Customer Interaction

A customer:

- Clicks an ad
- Submits a website form
- Initiates a chat

Captured fields:

- Name
 - Email
 - Phone
 - Message
 - Source
-

Step 2: System Capture & Logging

The CRM system:

- Stores customer data
 - Assigns a unique ID
 - Sets status as **New Request**
-

8. Request Classification Flow

Step 3: AI-Based Request Classification

The AI gatekeeper analyzes the customer message and classifies it as:

- **Sales Lead**
- **Support Query**

Based on this classification, the CRM routes the request to the appropriate flow.

9. Sales Lead Workflow (AI + Human)

Step 4: Lead Management AI Agent

The Lead Management AI Agent:

- Initiates chat with the customer
- Asks qualification questions:
 - Requirement
 - Budget
 - Timeline

The AI updates qualification data in the CRM.

Step 5: Lead Qualification Decision

The AI evaluates responses and categorizes the lead as:

- **Hot Lead (Ready to Buy)**
- **Not Ready / Cold Lead**

- **Irrelevant / Junk Lead**
-

Step 6A: Hot Lead Flow

If the lead is **Hot**:

- Lead marked as *Hot Lead*
 - Alert sent to human sales agent
 - Lead appears with priority tag in Sales Dashboard
-

Step 6B: Cold / Junk Lead Flow

If the lead is **Not Ready or Junk**:

- Lead moved to nurturing or archive
 - Optional automated follow-ups
 - No human intervention required
-

Step 7: Human Sales Agent Intervention

The human sales agent:

- Reviews AI-collected details
- Contacts the lead
- Updates lead status

Final outcomes:

- Deal Closed (Won)

- Deal Lost
-

10. Support Query Workflow (AI + Human)

Step 8: Customer Support AI Agent

The Support AI Agent:

- Engages the customer via chat
 - Attempts to resolve the issue using predefined workflows
-

Step 9: Resolution Decision

The AI determines whether:

- The issue is resolved
 - The issue is complex
-

Step 9A: Issue Resolved by AI

If resolved:

- Ticket marked as *Resolved*
 - Resolution message sent to customer
 - Ticket closed
-

Step 9B: Complex Issue Flow

If complex:

- Ticket marked as *Complex*
 - Escalated to human support agent
 - Full conversation history attached
-

Step 10: Human Support Agent Intervention

The human support agent:

- Reviews the case
- Communicates with customer
- Resolves the issue

Final outcome:

- Ticket Closed
-

11. CRM Screens & Modules

11.1 Dashboard

- Total Leads
 - Hot Leads
 - Open Tickets
 - Escalated Tickets
 - Recent activities
-

11.2 Leads Module

- Lead list with filters
 - Lead detail view
 - AI chat history
 - Status updates
-

11.3 Support Tickets Module

- Ticket list
 - Ticket details
 - Escalation tracking
 - Resolution actions
-

11.4 Activities Module

- Follow-ups
 - Reminders
 - Agent tasks
-

11.5 Reports Module

- Lead conversion funnel
- Sales performance
- Support resolution time

- AI vs Human handling metrics
-

11.6 Settings Module

- User management
 - Role permissions
 - Workflow rules
 - AI agent configuration
-

12. User Roles & Responsibilities

Admin

- User management
- Workflow configuration
- Report access

Sales Agent

- Handle hot leads
- Close deals

Support Agent

- Handle escalated tickets
 - Resolve complex issues
-

13. Benefits of This CRM System

- Centralized customer data
 - Faster lead qualification
 - Reduced agent workload
 - Better conversion rates
 - Improved customer experience
 - Scalable architecture
-

14. Future Enhancements

- Advanced analytics
 - More automation rules
 - Multi-channel communication
 - Deeper AI insights
-

15. Final Summary

This CRM system:

- Combines **structured CRM workflows** with **AI-assisted handling**
- Ensures **efficiency, scalability, and clarity**
- Allows humans to focus on **high-value decision-making**
- Is suitable for **enterprise, startup, and government use cases**
